

PRESS RELEASE

The boiler can be replaced even before applying for a boiler subsidy

- CZK 3.4 billion have been allocated for applicants in the second wave of the boiler subsidies;
- Applications for subsidies will be submitted electronically only;
- Solid fuel boilers are the source of the heaviest air pollution in the Czech Republic.

Prague, 21 August 2017 – Most of the Regions are planning to boost their support for applicants in the second wave of the boiler subsidies. According to information available to the Czech Gas Association (CGA), the money spent on, for example, new gas-fired condensing boilers will be refunded. These costs can be acknowledged retroactively in all the Regions as of 15 July 2015. Applicants for subsidies have therefore realistic chances of using new and environmentally-friendly boilers for heating this coming winter.
